JK FABRICATION PRESENTS: EMERGENCY TOW-STORAGE REEL

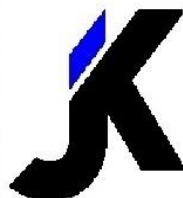

"JK Fabrication(Jim Kreider) just does an outstanding job.
His equipment designs deliver as advertised, and
the Emergency Tow Storage Reel is a prime example."

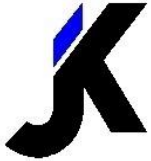

--Keith Barnes

Senior Director of Petroleum Barge Operations,
Harley Marine Services

- Recovery of adrift barge after loss of tug-barge tow connection
- Retrieval of reel's floater line begins recovery ops
- Six units of upgrade model sold since 2011, others earlier

EMERGENCY TOW-STORAGE REEL

Electric and hydraulic power supply options available (provided separately)

ADVANTAGES OF THE JK EMERGENCY TOW-STORAGE REEL SYSTEM

1. Wire capacity: 1600' of 1 3/4", 1200' of 2", or 900' of 2 1/4"
2. Smaller or larger models available as needed by customer
3. Designed and engineered to carry sufficiently heavy wire to conduct emergency tow operations
4. Modest footprint of unit allows for installation above or below deck, or behind bulwarks
5. Brake will apply sufficient tension to allow for all hookups before all wire rope is deployed
6. Reels can also be mounted on the tug for storing the under rider
7. Wire can be lubed and covered to reduce the effects of the marine environment
8. UPGRADE: new blast-and-primed weld-down plates (one set, with Grade 8 fasteners) allows for easier removal--for barge-to-barge or barge-to-vessel transfers
9. UPGRADE: hot-dipped galvanized frame and flame-sprayed and epoxy-coated drum ensures long-lasting marine service life
10. UPGRADE: new sprocket-flange installed allows for easier retrieval of deployed cables
